How to

2 more properties

1. Login /create account at brev.nvidia.com
2. Select an instance to run (I recommend **NVIDIA L40S (48 GB)**)
    a. Add credits
3. Run these commands locally to SSH into the machine

```
brew install brevdev/homebrew-brev/brev brev login brev shell
helpless-red-anaconda
```

4. Create a virtual environment and install vLLM

```
# you may need to first run `sudo apt update; sudo apt upgrade` uv
venv env source env/bin/activate # for older GPUs and cuda driver
versions, you'll need to install an # earlier release of vLLM.
otherwise, just use `pip install vllm` CUDA_VERSION=$(python -c \
'import torch; print(torch.version.cuda.replace(".", ""))') uv pip
install -U vllm \ --torch-backend=cu${CUDA_VERSION} \ --extra-index-
url "https://wheels.vllm.ai/nightly/cu${CUDA_VERSION}"
```

5. Select a model on https://huggingface.co/
6. Serve vLLM with python

```
python3 >>> from vllm import LLM >>> llm = LLM("vllm serve
google/gemma-4-12B-it") >>> llm.generate("Hello there")
```

7. OR serve with curl

```
vllm serve google/gemma-4-12B-it --port 8001 curl
http://localhost:8001/v1/chat/completions -H "Content-Type:
application/json" -d '{ "model": "", "messages": [ {"role": "user",
"content": "Explain quantum computing."} ], "max_tokens": 100 }'
```
